Pioneering Women in American Mathematics Jul 11 2021

More than 14 percent of the PhD's awarded in the United States during the first four decades of the twentieth century went to

women, a proportion not achieved again until the 1980s. This book is the result of a study in which the authors identified all of the American women who earned PhD's in mathematics before 1940, and collected extensive biographical and bibliographical information about each of them. By reconstructing as complete a picture as possible of this group of women, Green and LaDuke reveal insights into the larger scientific and cultural communities in which they lived and worked. The book contains an extended introductory essay, as well as biographical entries for each of the 228 women in the study. The authors examine family backgrounds, education, careers, and other professional activities. They show that there were many more women earning PhD's in mathematics before 1940 than is commonly thought. Extended biographies and bibliographical information are available from the companion website for the book:

www.ams.org/bookpages/hmath-34. The material will be of interest to researchers, teachers, and students in mathematics, history of mathematics, history of science, women's studies, and sociology. The data presented about each of the 228 individual members of the group will support additional study and analysis by scholars in a large number of disciplines.

Historical Atlas of Central Europe Feb 18 2022 Central Europe remains a region of ongoing change and continuing significance in the contemporary world. This third, fully revised edition of the Historical Atlas of Central Europe takes into consideration recent changes in the region. The 120 full-colour maps, each accompanied by an explanatory text, provide a concise visual survey of political, economic, demographic, cultural, and religious developments from the fall of the Roman Empire in the early fifth century to the present. No less than 19 countries are the subject of this atlas. In terms of today's borders, those countries include Lithuania, Poland, and Belarus in the north; the Czech Republic, Austria, Slovenia, Croatia, Hungary, and Slovakia in the Danubian Basin; and Serbia, Bosnia-Herzegovina, Montenegro, Romania, Moldova, Bulgaria, Macedonia, Albania, and Greece in the Balkans. Much attention is also given to areas immediately adjacent to the central European core: historic Prussia, Venetia, western Anatolia, and Ukraine west of the Dnieper River. Embedded in the text are 48 updated administrative and statistical tables. The value of the Historical Atlas of Central Europe as an authoritative reference tool is further enhanced by an extensive bibliography and a gazetteer of place names - in up to 29 language variants - that appear on the maps and in the text. The Historical Atlas of Central Europe is an invaluable resource for scholars, students, journalists, and general readers who wish

to have a fuller understanding of this critical area, with its many peoples, languages, and continued political upheaval.
