Future Bioenergy and Sustainable Land Use Aug 02 2022 Because of the major opportunities and risks associated with it, and the complexity of the subject, bioenergy policy has in a short time become a challenging political task for regulators and planners - a task that can only be accomplished through worldwide cooperation and the creation of an

international framework. This book's central message is that the sustainable potential of bioenergy, which can be tapped all over the world, should be utilized - provided that threats to sustainability are avoided. In particular, the use of bioenergy must not endanger food security or the goals of nature conservation and climate change mitigation.

Emerging Personal Wireless Communications Jul 01 2022 The growth of telecommunications has been largely based on mobile and data services in the past 10 years and the growth will continue. For instance, it is forecasted that after 2005 the mobile traffic turnover in Europe will exceed that of fixed telephone traffic and the penetration of Internet access through mobile will exceed that of fixed access. It is expected that the new value added services will be Internet-based and the IP traffic will outweigh the amount of traditional ISDN based telephone traffic. The transition from the existing telecommunications services to mobile and Internet based ones will change the service infrastructure as well as the customer and service management structures. In wireless communications there are several new standards being developed and implemented to improve the data transmission rate over radio channels, to combine both voice, packet data and multimedia

services in the terminals and to improve the service quality and usability. Narrow band packet radio standards such as General Packet Radio Service (GPRS) and i-Mode are already operative and broadband IMT-2000 standards, also called as Third Generation (3G) Mobile, have been developed in Japan, Europe and US. At the same time Wireless LAN and Bluetooth technologies mature and provide short-range data access to terminal devices. The emerging new technologies create opportunities not only to incumbent teleoperators but also to new network operators, IT companies and new service and content providers.

Encyclopedia of Endocrine Diseases Jul 09 2020 Encyclopedia of Endocrine Diseases, Second Edition, comprehensively reviews the extensive spectrum of diseases and disorders that can occur within the endocrine system. It serves as a useful and comprehensive source of information spanning the many and varied aspects of the endocrine and metabolic system. Students will find a concise description of the physiology and pathophysiology of endocrine and metabolic functions, as well as their diseases. Each article provides a comprehensive overview of the selected topic to inform a broad spectrum of readers, from advanced undergraduate students, to research professionals. Chapters explore the latest advances and hot topics that have emerged in recent years, such as the molecular basis of endocrine and metabolic diseases (mutations, epigenetics, signaling), the pathogenesis and therapy of common endocrine diseases (e.g. diabetes and endocrine malignancies), new technologies in endocrine research, new methods of treatment, and endocrine toxicology/disruptors. Covers all aspects of endocrinology and metabolism Incorporates perspectives from experts working within the domains of biomedicine (e.g. physiology,

pharmacology and toxicology, immunology, genetics) and clinical sciences to provide readers with reputable, multi-disciplinary content from domain experts Provides a 'one-stop' resource for access to information as written by world-leading scholars in the field, with easy cross-referencing of related articles to promote understanding and further research

Generational Use of New Media Jan 03 2020 Generational Use of New Media examines and contrasts how younger and older people,

representing different generations, engage with the new media that they increasingly encounter in everyday life. Exploring the various assumptions about the degrees to which younger and older people are more or less willing to use, or are capable of using, new media, the social circumstances under which they do so and the very design of those media, this book critically examines the gap that is assumed to exist between younger users of new media and older non-users. Thematically organised and offering comparative analyses of the generational use of new media and technology, this timely volume presents the latest research and rich new empirical material gathered in the EU, USA and Hong Kong, to reflect on societal practices and the practical implications of building a more inclusive information society.

Assessment of Reading in International Studies Jul 21 2021 This book brings together contributions from different scholarly contexts that address a diverse range of

focused topics, as well as empirical and conceptual perspectives, on research with international studies. Some chapters focus on technical aspects, exploring opportunities for drawing causal inferences from the data, and investigating biases originating in distributional scale properties. Others are of a more conceptual nature, addressing changes in the relevance of socio-economic indicators across time and countries, examining the exposure of mother-tongue and English instruction on performance and investigating the effects of test construction on gender difference. The discussion takes a much-needed meta-perspective on the usefulness of international large-scale assessments for educational research and allows reflection upon possibilities and opportunities for their improvement. This book was originally published as a special issue of Assessment in Education.

Carbon Capture, Storage and Use Sep 30 2019
Carbon Capture and Storage technologies (CCS) are moving from experiment toward commercial applications at a rapid pace, driven by urgent demand for carbon mitigation strategies. This book examines the potential role of CCS from four perspectives: technology development,

economic competitiveness, environmental and safety impacts, and social acceptance. IEK-STE of Forschungszentrum Juelich presents this interdisciplinary study on CCS, based on methods of Integrated Technology Assessment. Following an introductory chapter by editor Wilhelm Kuckshinrichs, Part I of the book surveys the status of carbon capture technologies, and assesses the potential for research and development of applications that are useful at scales required for meaningful mitigation. Transportation, Utilization and Environmental Aspects of CO₂ receive chapter-length treatments, and the section concludes with an examination of safe geological storage of CO₂ based on the example of the Ketzin pilot site, not far from Berlin. Part II covers Economic and Societal Perspectives. The first chapter discusses the use of CCS in the energy sector, analyzing costs associated with electricity generation and CO₂ mitigation on the basis of technology-specific cost and process parameters, along with a merit-order illustration of the possible implications of CCS facilities for energy costs. Later chapters outline the costs of CCS application in energy- and CO₂-intensive industries; analyze system characteristics of CCS infrastructures, showing that the infrastructure cost function depends on the

ratio of fixed to variable costs, as well as on the spatial distribution of CO₂ sources and storage facilities; interpret cross-sector carbon mitigation strategies and their impacts on the energy and CO₂ balance; and discuss awareness and knowledge of CCS, attitudes towards it, and how the risks and benefits of CCS are perceived. Part III discusses the Framework for Energy and Climate Policy, with chapters on acceptance and adoption of CCS policy in Germany, and the EU, and an assessment of international cooperation in support of CCS. The final chapter summarizes the central arguments, discusses the potential role of carbon capture and utilization as part of a German transformation strategy, and extrapolates the findings to European and international contexts.

Achieving Effective Integrated E-Care Beyond the Silos Mar 17 2021 Recent global and national debates have shown that demographic change, the rising incidence of chronic disease, and the unmet need for more personalized care are trends demanding a new, integrated approach to health and social care. The advancement and adoption of technology in both health and social care settings is a valuable tool for encouraging change and

improving the quality and efficiency of care provided to patients and care clients. *Achieving Effective Integrated E-Care Beyond the Silos* presents a collection of real-life examples, frameworks, business models, financial implications, and methods of evaluating the technological tools that are enabling a more human-centered approach to health and social care. Based on relevant research in the field of integrated e-care, this publication is ideally designed for use by practitioners, researchers, and decision-makers in the care field.

Data Communication and Computer Networks: A Business User's Approach Apr 29 2022 Whether you are preparing for a career as a business manager, computer programmer or system designer, or you simply want to be an informed home computer user, West's *DATA COMMUNICATIONS AND COMPUTER NETWORKS*, 9th Edition provides an understanding of the essential features, operations and limitations of today's computer networks. You learn about systems both on premises and in the cloud as the author balances technical concepts with practical, everyday issues. Updates address the latest developments and practices in cloud business principles and security techniques, software-defined networking, 5G, the Internet of Things, data analytics and supporting remote

workforces. This edition also covers the CompTIA's Cloud Essentials+ exam to help you prepare for this vendor-neutral, business-oriented cloud computing certification. Hands-on learning features and thought-provoking content also guide you through virtual networking technologies, industry convergence and wired and wireless LAN technologies. The 145 papers included in this HCI 2020 proceedings were organized in topical sections as follows: Part I: design theory, methods and practice in HCI; understanding users; usability, user experience and quality; and images, visualization and aesthetics in HCI. Part II: gesture-based interaction; speech, voice,

conversation and emotions; multimodal interaction; and human robot interaction. Part III: HCI for well-being and Eudaimonia; learning, culture and creativity; human values, ethics, transparency and trust; and HCI in complex environments. *The conference was held virtually due to the COVID-19 pandemic.

Persuasive Technology Sep 22 2021 This book constitutes the refereed proceedings of the 13th International Conference on Persuasive Technology, PERSUASIVE 2018, held in Waterloo, ON, Canada, in April 2018. The 21 revised full papers and 4 short papers presented were carefully reviewed and selected from 59 submissions. The papers demonstrate how persuasive technologies can help solve societal issues. They explore new frontiers for persuasive technology, such as personalized persuasion, new sensor usage, uses of big data, and new ways of creating engagement through gaming or social connection, focusing on a variety of technologies (e.g., web, wearables, AI, and smart environments). The papers are organized in the following topical sections: social means to persuasion; nudging and just-in-time interventions; design principles and practices; persuasive games; personalization and tailoring; and theoretical reflections.

Indian Diaspora Aug 22 2021 In historic and ethnographic accounts of Indians living in diaspora, the elderly seem to receive much less attention than the new generation and its progress, prosperity and success. Using critical pedagogy approach, this book attempts to close that gap by focusing on the voices of the Punjabi, Bengali, Sindhi, and Gujarati diasporic Indians elderly, living in five countries.

Human-Computer Interaction Symposium Oct 31 2019 The IFIP World Computer Congress (WCC) is one of the most important conferences in the area of computer science and a number of related Human and Social Science disciplines at the worldwide level and it has a federated structure, which takes into account the rapidly growing and expanding interests in this area. Human-Computer Interaction is now a mature and still dynamically evolving part of this area, which is represented in IFIP by the

Technical Committee 13 on HCI. We are convinced that in this edition of WCC, which takes place for the first time in Italy, it will be interesting and useful to have a Symposium on Human-Computer Interaction in order to present and discuss a number of contributions in this field. There has been increasing awareness among designers of interactive systems of the importance of designing for usability, but we are still far from having products that are really usable, and usability can mean different things depending on the application domain. We are all aware that too many users of current technology feel often frustrated because computer systems are not compatible with their abilities and needs with existing work practices. As designers of tomorrow technology, we have the responsibility of creating computer artefacts that would permit better user experience with the various computing devices, so that users may enjoy more satisfying experiences with information and communications technologies.

A Romance Perspective on Language Knowledge and Use Feb 02 2020 Twenty-one articles from the 31st LSRL investigate cutting-edge issues and interfaces across phonology, pragmatics, sociolinguistics, semantics, and syntax in multiple dialects of such Romance languages as

Catalan, French, Creole French, and Spanish, both old and modern. Research in Romance phonology moves from the quantitative and synchronic to cover issues of diachrony and Optimality theory. Work within pragmatics and sociolinguistics also explores the synchronic/diachronic link while topicalizing such issues as change of non-pro-drop Swiss French toward pro-drop status, scalar implicatures, speech acts, word order, and simplification in contexts of language contact. Finally, debates in linguistic theory are resumed in the work on syntax and semantics within both a Minimalist perspective and an Optimality framework. How do Catalan and French children acquire AGR and TNS? Can Basque Spanish be compared to topic-oriented Chinese? If Spanish preverbal subjects occur in an A-position, can Spanish no longer be compared to Greek?

MOBILE COMPUTING Nov 12 2020 This textbook provides students with a sound foundation in the concepts and applications of mobile computing. It discusses all the relevant topics in mobile computing in a clear and straightforward style. The book begins with an introduction to the subject and then moves on to describe the fundamentals of wireless communication including a brief description of different modulation techniques. The text

includes coverage of second generation (2G) cellular network together with its two important implementation standards GSM & IS-95; it also discusses WLL and WLAN. In addition, it presents a variety of data services available in the domain of mobile computing with other relevant issues. Finally, it gives a brief on UMTS, a representative of the third generation (3G) of cellular networks. The fundamental tenets of mobile computing, such as mobility management, channel assignment, protocols at air interface, and system design are carefully covered for all categories of wireless networks described here. A perfect balance between theoretical aspects of mobile computing and its implementation standards has been maintained throughout the book. Many examples and exercises are included, which will help students prepare for examinations. The book is intended primarily for students of B.E./B.Tech. of Computer Science and Engineering, Information Technology, Electronics and Communication Engineering, and related disciplines. It will also be useful to the students of BCA/MCA and B.Sc./M.Sc. (Computer Science/Electronics).

Communicating about Risks and Safe Use of

Medicines Aug 29 2019 At the core of this book lies the question how to approach medicines, risks and communication as a researcher - or anybody planning and evaluating a communication intervention, or wanting to understand communication events in private and the media. With a view to tackle current shortcomings of communication systems and processes for improved implementation, patient satisfaction and health outcomes, a multilayered approach is presented. This combines multiple data types and methods to obtain a wider and deeper understanding of the major parties and their interactions, as well as the healthcare, social and political contexts of information flows, how they interfere and which impact they have. Illustrated with real life experiences of safety concerns with medicines, worldwide active experts discuss the methods and contributions their disciplines can offer. With considerations on terminologies, tabulated overviews on communication types and outcomes, a patient-centred vision and plain language for non-medical readers, the book creates a platform for multidisciplinary collaborations amongst researchers as well as practitioners from communications, healthcare, the social sciences and pharmacovigilance. Importantly, it advocates for an active role

of patients and highlights the achievements and aspirations of patient organisations. Finally, the book suggests establishing an inclusive discipline of humanities and epidemiology of medicinal product risk communication to realise full research potential. The authors are driven by the curiosity for communication as the most human behaviour, and as good health is amongst the basic human needs, medicinal product risk communication is an exciting research field of high global relevance.

Future Perspectives of 2nd Generation Biofuels Nov 05 2022 Fossil independence and substantial reductions in CO₂ emissions seem to be possible with 2nd generation biofuels. New technologies allow a full carbon-to-fuel conversion of non-edible plant parts such as straw or wood, and the cultivation of algae or salt-resistant plants uncouples bioenergy from food production. Nevertheless, impacts on biodiversity, global land and water use are widely unclear and their competitiveness with 1st generation biofuels and electric mobility is an open question. An interdisciplinary team of Empa, University of Zurich and the Institute of Climate, Environment and Energy in Wuppertal evaluated the most sustainable production techniques and assessed their potential for our future mobility.

Discourse Across Languages and Cultures Aug 10 2020 This volume brings together for the first time research by linguists working in cross-linguistic discourse analysis and by second language researchers working in the contrastive rhetoric tradition. The collection of articles by prominent authors and younger scholars encompasses a variety of research approaches and treats numerous naturally-occurring spoken and written genres, including conversations, narratives, academic expository writing, journalism, advertising, and professional promotional texts. Languages examined include English, Spanish, French, Brazilian Portuguese, Korean, Japanese, Chinese, Hebrew, Urdu, Dutch, Turkish and Serbo-Croatian. Taken individually and collectively, the articles in this collection draw important conclusions concerning the

roles of cognition, multilingualism, communities of practice, and linguistic typology in shaping discourse within and across cultures.

The Future Use of Nordic Forests Mar 29 2022
Diverse as they are in their histories and in the organization of their forest sectors, most Nordic countries have this in common: their economies and cultures are substantially based on the utilization of various forest resources. This book explores Nordic forest futures and presents research results that form part of a scientific foundation for considering how to balance the functions of forests. It is particularly concerned with global trends that may affect the future use of boreal forests. Chapters investigate inter-alia the growing world population and the expected economic growth in countries with huge populations, and assess the resulting pressure on all land-based resources. Authors examine the urgent need for solutions to the energy crisis, consider worrying climate scenarios and provide a global outlook on bioenergy futures. Readers will discover how these developments will and must influence long-term strategic decisions on the future use of Nordic forests. The challenges and possible responses for future forest governance and forestry issues emerge, as the

chapters go on to consider the multiple pressures in particular on the Swedish Forestry Model, among other themes. “By bringing together a distinguished group of internationally renowned scientists representing a diverse set of disciplines covering political science, geography, rural development, forest economics, history, and geo-sciences, this book constitutes an exceptionally profound and thoughtful futures study.” – Alexander Buck, Executive Director, International Union of Forest Research Organizations (IUFRO)

Alternative Fuels and Their Utilization Strategies in Internal Combustion Engines Jun 07 2020 This book covers alternative fuels and their utilization strategies in internal combustion engines. The main objective of this book is to provide a comprehensive overview of the recent advances in the production and utilization aspects of different types of liquid and gaseous alternative fuels. In the last few years, methanol and DME have gained significant attention of the energy sector, because of their capability to be utilized in different types of engines. This book will be a valuable resource for researchers and practicing engineers alike.

Proceedings of the 21st International Meshing Roundtable Oct 24 2021 This volume contains

the articles presented at the 21st International Meshing Roundtable (IMR) organized, in part, by Sandia National Laboratories and was held on October 7-10, 2012 in San Jose, CA, USA. The first IMR was held in 1992, and the conference series has been held annually since. Each year the IMR brings together researchers, developers, and application experts in a variety of disciplines, from all over the world, to present and discuss ideas on mesh generation and related topics. The technical papers in this volume present theoretical and novel ideas and algorithms with practical potential, as well as technical applications in science and engineering, geometric modeling, computer graphics, and visualization.
