**Historical and Philosophical Foundations of European Legal Culture** Dec 09 2020 This ambitious book examines the historical, theoretical, and axiological foundations of European legal culture, and explores their practical impacts on current European law and legal ways of thinking in Europe. Including considerations about the history of law as well contemporary legal issues, the book consists of seven chapters authored by scholars from across the globe, from Italy to Taiwan. This volume shows that it is possible to speak of one European legal culture in terms of various countries' common legal origins (Roman law, Greek philosophy, and medieval jurisprudence as the ius commune), while also discussing distinct national legal cultures and traditions in Europe. However, to understand the present day law and legal profession, it is necessary to go back to the values, theories, and thinkers which were influential in the progress of European law from ancient times to the 19th century. The book not only presents the theoretical and historical issues of European legal culture, but also acquaints the audience with the true axiological foundations of our contemporary legal institutions, and the methods of legal thinking in Europe. It is clear that many of our current

legal concepts and institutions come from theorists such as Aristotle, Ulpian, Aquinas, Hobbes and Savigny. The book will be of particular interest to scholars and students of legal history, jurisprudence, and European law, especially in the context of the origins of European legal culture. Moreover, it will also appeal to all lawyers working in both the common law and the civil law traditions wishing to gain a greater understanding of European legal heritage.

*Big Ideas In Mathematics: Yearbook 2019, Association Of Mathematics Educators* Aug 29 2022 The new emphasis in the Singapore mathematics education is on Big Ideas (Charles, 2005). This book contains more than 15 chapters from various experts on mathematics education that describe various aspects of Big Ideas from theory to practice. It contains chapters that discuss the historical development of mathematical concepts, specific mathematical concepts in relation to Big Ideas in mathematics, the spirit of Big Ideas in mathematics and its enactment in the mathematics classroom.This book presents a wide spectrum of issues related to Big Ideas in mathematics education. On the one end, we have topics that are mathematics content related, those that discuss the underlying principles of Big Ideas, and others that deepen the readers' knowledge in this area, and on the other hand there are practice oriented papers in preparing practitioners to have a clearer picture of classroom enactment related to an emphasis on Big Ideas.

**Mindset Mathematics:**

**Visualizing and Investigating Big Ideas, Grade 6** Sep 25 2019 Engage students in mathematics using growth mindset techniques The most challenging parts of teaching mathematics are engaging students and helping them understand the connections between mathematics concepts. In this volume, you'll find a collection of low floor, high ceiling tasks that will help you do just that, by looking at the big ideas at the sixth-grade level through visualization, play, and investigation. During their work with tens of thousands of teachers, authors Jo Boaler, Jen Munson, and Cathy Williams heard the same message—that they want to incorporate more brain science into their math instruction, but they need guidance in the techniques that work best to get across the concepts they needed to teach. So the authors designed Mindset Mathematics around the principle of active student engagement, with tasks that reflect the latest brain science on learning. Open, creative, and visual math tasks have been shown to improve student test scores, and more importantly change their relationship with mathematics and start believing in their own potential. The tasks in Mindset Mathematics reflect the lessons from brain science that: There is no such thing as a math person - anyone can learn mathematics to high levels. Mistakes, struggle and challenge are the most important times for brain growth. Speed is unimportant in mathematics. Mathematics is a visual and beautiful subject, and our brains want to think visually about mathematics. With engaging questions, open-ended tasks, and four-color visuals that will help kids get excited about mathematics, Mindset Mathematics is organized around nine big ideas which emphasize the connections within the Common Core State Standards (CCSS) and can be used with any current curriculum.

**Five Big Ideas for Effective**

**Teaching** Oct 26 2019 This is the second edition of the seminal text designed to empower educators with an innovative and inspiring conceptual framework for effective teaching. This bestseller is grounded in the synergy of five big ideas for connecting mind, brain, and education research to classroom practice: neuroplasticity, potential, malleable intelligence, the Body-Brain System, and metacognition. Updated and expanded to include new sections on social and emotional learning, this edition offers a firm foundation for implementing current rigorous standards. The authors draw on their experience working with tens of thousands of educators worldwide to drive the book's focus on practical application. Essential ideas are reinforced through vignettes, examples, inspirational stories from teachers, strategies, reflective questions, and current research on how people learn. "Five Big Ideas for Effective Teaching is a wonderful synthesis of some of the most important and impacting concepts to come out of the learning sciences and into the classroom. Any serious teacher and educational leader should consider this basic reading. A pleasure to read." —Tracey Tokuhama-Espinosa, professor, Harvard University Extension School "Wilson and Conyers provide an excellent, gentle entry into the modern learning sciences while promoting clear understanding of their importance and impact on contemporary learners. This is a solid introductory text for pre-service teachers as well as a 'quick start' for updating skills for veteran educators." —Linda Rittner, professor emerita, University of Central Oklahoma

**Science as Thinking** Aug 24 2019 You are about to immerse yourself in a gorgeously readable and engaging account of how teachers can move science instruction from “hands on to minds on.” Wendy Ward Hoffer describes how teachers can extrapolate what is known about good thinking strategies instruction to science teaching and learning. Hoffer

illuminates the path for thousands of teachers (in science and beyond) who today work with those who will lead this country's efforts in energy, health care, the exploration of sea and space, and the protection of our planet.What work is more vital to our future? - Ellin Oliver Keene Coauthor of Mosaic of Thought, Second Edition This book by an experienced teacher takes professional development to a new level. Many authors of books designed to improve education try to integrate best research with best practice. Few succeed as well as Wendy Hoffer. - J. Myron Atkin Stanford University Inquiry is how we learn about the world. Every day we ask questions, gather evidence, make observations, and draw conclusions. Science as Thinking shows how powerful instruction can connect the natural curiosity students bring to class to the science curriculum. Wendy Ward Hoffer uses the fundamental scientific principles of constants and variables as a framework for highly effective science teaching. She begins with constants, the basics of science instruction: Inquiry, Big Ideas, Workshop, Assessment, Culture. Hoffer shows how building a teaching foundation on these constants ensures that all of your planning, lessons, and interactions spark students' interests and support deep thinking about science. Hoffer's variables are the practices you select from every day - labs, demonstrations, lectures, projects, and other classroom staples. She illustrates how these variables can be carefully manipulated to maximize student engagement, thinking, and understanding. Science as Thinking is a wonderful resource for new teachers, but it will just as soon be sticky-noted and dog-eared by veterans. It helps you: get started and sustain progress with classroom-tested strategies for implementing, teaching, and refining high-quality instruction make direct

connections between theory and practice through planning questions conduct meaningful assessment with sample rubrics. If you're as serious about improving students' learning as they are curious about their world, then read Science as Thinking. In it you'll find highly effective and satisfying ways to teach science and turn any science curriculum into the turning point of a young scientist's life. *Dialogic Education* Dec 29 2019 Dialogue has long been used in primary classrooms to stimulate thinking, but it is not always easy to unite the creative thinking of good dialogue with the need for children to understand the core concepts behind knowledge-rich subjects. A sound understanding of key concepts is essential to progress through the national curriculum, and assessment of this understanding along with effective feedback is central to good practice. Dialogic Education builds upon decades of practical classroom research to offer a method of teaching that applies the power of dialogue to achieving conceptual mastery. Easy-to-follow template lesson plans and activity ideas are provided, each of which has been tried and tested in classrooms and is known to succeed. Providing a structure for engaging children and creating an environment in which dialogue can flourish, this book is separated into three parts: Establishing a classroom culture of learning; Core concepts across the curriculum; Wider dialogues: Educational adventures in the conversation of mankind. Written to support all those in the field of primary education, this book will be an essential resource for student, trainee and qualified primary teachers interested in the educational importance of dialogue.

**Mathematics Learning in Early Childhood** Jan 28 2020 Early childhood mathematics is vitally important for young children's present and future educational success. Research demonstrates that virtually all

young children have the capability to learn and become competent in mathematics. Furthermore, young children enjoy their early informal experiences with mathematics. Unfortunately, many children's potential in mathematics is not fully realized, especially those children who are economically disadvantaged. This is due, in part, to a lack of opportunities to learn mathematics in early childhood settings or through everyday experiences in the home and in their communities. Improvements in early childhood mathematics education can provide young children with the foundation for school success. Relying on a comprehensive review of the research, Mathematics Learning in Early Childhood lays out the critical areas that should be the focus of young children's early mathematics education, explores the extent to which they are currently being incorporated in early childhood settings, and identifies the changes needed to improve the quality of mathematics experiences for young children. This book serves as a call to action to improve the state of early childhood mathematics. It will be especially useful for policy makers and practitioners-those who work directly with children and their families in shaping the policies that affect the education of young children.

*Interactions of Land, Ocean and Humans* Mar 31 2020 Written by Chris Maser, one of the architects of the sustainability movement, Interactions of Land, Ocean and Humans: A Global Perspective explores a critical number of the myriad aspects that comprise the great, reciprocal feedback loops between the mountain peaks, the deep sea, and everywhere in between. Maser’s exploration of these connections gives us the tools required to open our imaginations and our scientific literacy, offering insights into the relationships between the land, sea, and people that could influence us toward better

decisions. The author examines the hydrological cycle, hydrological continuum, and anthropogenic pollution of various kinds from the atmosphere to deep belowground. He also highlights connections by detailing how human behavior changes the atmosphere, which changes the oceans, which alters the climate, which alters the atmosphere and thus the ocean, and so on. The book then explores the biophysical commonalities between landscapes and seascapes, as well as the habitats, in each realm. It covers marine fisheries; marine protected areas; oceans as a commodity, as part of the global commons, as a biophysical living trust for which we are the trustees and the children of today and beyond are the beneficiaries; and more. Can we arrest this deleterious process? Yes, but it will take a dramatic shift in human behavior worldwide. Why? Because, just as the collective human behavior and lack of awareness caused the problems in the first place, the level of consciousness that caused the problem is not the level of consciousness that can fix it. We must shift our thinking from that which is symptomatic to that which is systemic if we are to have a sustainably productive environment through time. Maser gives us the understanding of the biophysical interactions among the lands, oceans, and peoples of the world needed to create sustainable solutions to environmental problems.

In Small World, Big Ideas, Satish Kumar collects the voices of some of the most passionate activists fighting for a better world, and shares their insights into how we can achieve this.

*The Communication Effect* Nov 19 2021 The “communication effect” is what happens when we saturate our classrooms with authentic communication, which occurs when students

use language to build up ideas and do meaningful things. For starters, authentic communication deepens and increases language development, learning of content concepts and skills, rigor and engagement, empathy and understanding of others' perspectives, agency and ownership of core ideas across disciplines, and social and emotional skills for building strong relationships. And these are just the starters. With The Communication Effect, Dr. Jeff Zwiers challenges teachers in Grades 3 and up to focus less on breadth and more on depth by grounding instruction and assessment in authentic (rather than pseudo-) communication. This book provides: Ideas for cultivating classroom cultures in which authentic communication thrives Clear descriptions and examples of the three features of authentic communication: 1. building up key ideas (claims and concepts); 2. clarifying terms and supporting ideas; and 3. creating and filling information gaps Over 175 suggestions for using the three features of authentic communication to enhance twenty commonly used instructional activities across disciplines Additional examples of not-so-commonly-used activities that embody the three features Suggestions for improving four different types of teacher creativity needed to design effective lessons, activities, and assessments that maximize authentic communication Our students deserve to get the most out of each minute of each lesson. Authentic communication can help. As you read The Communication Effect and apply its ideas, you will see how much better equipped and inspired your students are to grow into the amazing and gifted people that they were meant to become.

**Brand Vision** Feb 29 2020 David Taylor's third book lifts the lid on why so many brand visioning projects end in failure: an overly theoretical and complex approach he calls 'strategy tourism'. By contrast, his straightforward, no-nonsense programme will ensure that you end up with an inspiring vision and a hands-on action plan to drive growth. Designed in a highly practical format, brandvision shows how to lead your team on a step-by-

step 'visioning journey' that builds engagement, energy and alignment. Powerful tips, tools and tricks help you start applying the principles to your business today: Searching for true insight: creating a springboard for visioning by using different 'insight catalysts' that cover consumers, markets and competition The visioning journey: creating a compelling brand purpose, a big idea and a rallying call; combining product 'sausage' and emotional 'sizzle' Test-driving the vision: bringing the vision to life by exploring it within your business and with consumers Brand-led business: translating the vision into a business building mix that covers 'hero product' innovation, communication and internal engagement Thought-provoking and irreverent, brandvision demonstrates all the dos and don'ts of brand visioning with many stories of success (and screw-ups) including T-Mobile, Dove, Porsche, Absolut and James Bond. It is an invaluable toolkit for anyone interested in rethinking a brand vision - whatever its shape or size.

**Generating Tact and Flow for Effective Teaching and Learning** Sep 05 2020 This book draws from and analyzes teachers' and students' stories of great classes in order to promote teachers' development of pedagogical tact and to encourage flow states for students. Taken together, these theoretical lenses—pedagogical tact and flow—provide a valuable framework for understanding and motivating classroom engagement. As the authors suggest, tactful teachers are more likely to see their students in flow than teachers who struggle with basic classroom routines and practices. Grounded in narrative research, and written for pre-service teachers, the book offers strategies for replicating these first-hand accounts of peak classroom teaching and learning.

Teaching History with Big Ideas May 14 2021 In the case studies that make up the bulk of this book, middle and high school history teachers describe the decisions and plans and the problems and possibilities they encountered as they ratcheted up their instruction through the use of big ideas. Framing a teaching unit around a question such as 'Why don't we know anything about Africa?' offers both teacher and students opportunities to explore historical actors, ideas, and events in ways both rich and engaging. Such an approach exemplifies the construct of ambitious teaching, whereby teachers demonstrate their ability to marry their deep knowledge of subject matter, students, and the school context in ways that fundamentally challenge the claim that history is 'boring.'
