A provocative exploration of the tension between our evolutionary history and our modern woes—and what we can do about it. We are living through the most prosperous age in all of human history, yet we are listless, divided, and miserable. Wealth and comfort are unparalleled, but our political landscape is unmoored, and rates of suicide, loneliness, and chronic illness continue to skyrocket. How do we explain the gap between these truths? And how should we respond? For evolutionary biologists Heather Heying and Bret Weinstein, the cause of our troubles is clear: the accelerating rate of change in the modern world has outstripped the capacity of our brains and bodies to adapt. We evolved to live in clans, but today many people don't even know their neighbors' names. In our haste to discard outdated gender roles, we increasingly deny the flesh-and-blood realities of sex—and its ancient roots. The cognitive dissonance spawned by trying to live in a society we are not built for is killing us. In this book, Heying and Weinstein draw on decades of their work teaching in college classrooms and exploring Earth's most biodiverse ecosystems to confront today's pressing social ills—from widespread sleep deprivation and dangerous diets to damaging parenting styles and backward education practices. Asking the questions many modern people are afraid to ask, *A Hunter-Gatherer's Guide to the 21st Century* outlines a science-based worldview that will empower you to live a better, wiser life. *The Archaeology of Large-Scale Manipulation*

of Prey explores the social and functional aspects of large-scale hunting adaptations in the archaeological record. Mass-kill hunting strategies are ubiquitous in human prehistory and exhibit culturally specific economic, social, environmental, and demographic markers. Here, seven case studies—primarily from the Americas and spanning from the Folsom period on the Great Plains to the ethnographic present in Australia—expand the understanding of large-scale hunting methods beyond the customary role of subsistence and survival to include the social and political realms within which large-scale hunting adaptations evolved. Addressing a diverse assortment of archaeological issues relating to the archaeological signatures and interpretation of mass-kill sites, *The Archaeology of Large-Scale Manipulation of Prey* reevaluates and rephrases the deep-time development of hunting and the themes of subsistence to provide a foundation for the future study of hunting adaptations around the globe. Authors illustrate various perspectives and avenues of investigation, making this an important contribution to the field of zooarchaeology and the study of hunter-gatherer societies throughout history. The book will appeal to archaeologists, ethnologists, and ecologists alike. Contributors: Jane Balme, Jonathan Driver, Adam C. Graves, David Maxwell, Ulla Odgaard, John D. Speth, María Nieves Zedeño This thought provoking collection of new research papers explores the extent of variation amongst hunting and gathering peoples past and present and the considerable analytical challenges presented by this diversity. This problem is especially important in archaeology, where increasing empirical evidence illustrates ways of life that are not easily encompassed within the range of variation recognised in the contemporary world of surviving hunter-gatherers. Put simply, how do past hunter-gatherers fit into our understandings of hunter-gatherers? Furthermore, given the inevitable archaeological reliance on analogy, it is important to ask whether conceptions of hunter-gatherers based on contemporary societies restrict our comprehension of past diversity and of how this changes over the long term. Discussion of hunter-gatherers shows them to be varied and flexible, but modelling of contemporary hunter-gatherers has not only reduced them into essential categories, but has also portrayed them as static and without history. It is often said that the study of hunter-gatherers can provide insight into past forms of social organisation and behaviour; unfortunately too often it has limited our understandings of these societies. In contrast, contributors here explore past hunter-gather diversity over time and space to provide critical perspectives on general models of 'hunter-gatherers' and attempt to provide new perspectives on hunter-gatherer societies from the greater diversity present in the past. Mathews uses a limited definition of paranormal, and examines works set, for the most part, in a relatively realistic modern world inhabited by both humans and

paranormal beings. Tuberculosis is an ancient disease, but it's not a disease of history. With more than a million victims every year – more than any other disease, including malaria – and antibiotic resistance now found in every country worldwide, tuberculosis is once again proving itself to be one of the smartest killers humanity has ever faced. But it's hardly surprising considering how long it's had to hone its skills. Forty-thousand years ago, our ancestors set off from the cradle of civilisation on their journey towards populating the planet. Tuberculosis hitched a lift and came with us, and it's been there ever since; waiting, watching, and learning. In *The Robber of Youth*, Kathryn Loughheed, a former TB research scientist, tells the story of how tuberculosis and humanity have grown up together, with each being shaped by the other in more ways than you could imagine. This relationship between man and microbe has spanned many millennia and has left its mark on both species. We can see evidence of its constant shadow in our genes; in the bones of the ancient dead; in art, music and literature. Tuberculosis has shaped societies – and it continues to do so today. The organism responsible for TB, *Mycobacterium tuberculosis*, has had plenty of time to adapt to its chosen habitat – human lungs – and has learnt through natural selection to be an almost perfect pathogen. Using our own immune cells as a Trojan Horse to aid its spread, it's come up with clever ways to avoid being killed by antibiotics. But patience has been its biggest lesson – the bacterium can enter into a latent state when times are tough, only to come back to life when a host's immune system can no longer put up a fight. Today, more than one million people die of the disease every year and around one-third of the world's population are believed to be infected. That's more than two billion people. Throw in the compounding problems of drug resistance, the HIV epidemic and poverty, and it's clear that tuberculosis remains one of the most serious problems in world medicine. *The Robber of Youth* follows the history of TB through the ages, from its time as an infection of hunter-gatherers to the first human villages, which set it up with everything it needed to become the monstrous disease it is today, through to the perils of industrialisation and urbanisation. It goes on to look at the latest research in fighting the disease, with stories of modern scientific research, interviews doctors on the frontline treating the disease, and the personal experiences of those affected by TB. Throughout history and across social and cultural contexts, most systems of belief—whether religious or secular—have ascribed wisdom to those who see reality as that which transcends the merely material. Yet, as the studies collected here show, the immaterial is not easily separated from the material. Humans are defined, to an extraordinary degree, by their expressions of immaterial ideals through material forms. The essays in *Materiality* explore varied manifestations of materiality from ancient times to the present. In assessing the fundamental role of materiality in shaping humanity, they signal the need to decenter the social within social anthropology in order to make room for the material. Considering topics as diverse as theology, technology, finance, and art, the contributors—most of whom are anthropologists—examine the many different ways in which materiality has been understood and the consequences of these differences. Their case studies show that the latest forms of financial trading instruments can be compared with the oldest ideals of ancient Egypt, that the promise of software can be compared with an age-old desire for an unmediated relationship to divinity. Whether focusing on the theology of Islamic banking, Australian Aboriginal art, derivatives trading in Japan, or textiles that respond directly to their environment, each essay adds depth and nuance to the project that *Materiality* advances: a profound acknowledgment and rethinking of one of the basic properties of being human. "Healing the Body Politic" examines the contested place of health and development in El Salvador over the last two decades. It recounts the dramatic story of radical health activism from its origins in liberation theology and guerrilla medicine during the third-world country's twelve-year civil war, through development of a remarkable "popular health system," administered by lay providers in a former war zone controlled by leftist rebels. The ethnography contributes to the integration of medical and political anthropology by bringing the semiotics of health and the body to bear on cultural understandings of warfare, the state, and globalization. First Published in 2004. Routledge is an imprint of Taylor & Francis, an informa company. In today's world hunter-gatherer societies struggle with seemingly insurmountable problems: deforestation and encroachment, language loss, political domination by surrounding communities. Will they manage to survive? This book is about one such society living in the monsoon rainforests of western Nepal: the Raute. *Kings of the Forest* explores how this elusive ethnic group, the last hunter-gatherers of the Himalayas, maintains its traditional way of life amidst increasing pressure to assimilate. Author Jana Fortier examines Raute social strategies of survival as they roam the lower Himalayas gathering wild yams and hunting monkeys. Hunting is part of a symbiotic relationship with local Hindu farmers, who find their livelihoods threatened by the monkeys' raids on their crops. Raute hunting helps the Hindus, who consider the monkeys sacred and are reluctant to kill the animals themselves. Fortier explores Raute beliefs about living in the forest and the central importance of foraging in their lives. She discusses Raute identity formation, nomadism, trade relations, and religious beliefs, all of which turn on the foragers' belief in the moral goodness of their unique way of life. The book concludes with a review of issues that have long been important to anthropologists—among them, biocultural diversity and the shift from an evolutionary focus on the ideal hunter-gatherer to an interest in hunter-gatherer diversity. *Kings of the*

Williams The Plateau region of the Pacific Northwest has witnessed the emergence, persistence, and decline of a diverse array of hunter-gatherer communities during the past several thousand years. Consequently, the region contains an archaeological record of groups who have lived at times in permanent villages, employed complex resource procurement and processing strategies, participated in wide-ranging trade networks, and maintained social organizations featuring high degrees of social inequality. Contributors seek to understand prehistoric social organization, subsistence practices, and lifeways of those living on the Plateau and to expand upon this foundation to assess the general evolution and organization of complex hunter-gatherers. This book provides a basic introduction to key debates in the study of hunter-gatherers, specifically from an anthropological perspective, but designed for an archaeological audience. Hunter-

gatherers have been the focus of intense anthropological research and discussion over the last hundred years, and as such there is an enormous literature on communities all over the world. Yet, among the diverse range of peoples studied, there are a number of recurrent themes, including not only the way in which people make a living (hunting, gathering and fishing) but also striking similarities in other areas of life such as belief systems and social organisation. These themes are described and then explored through archaeological case-studies. The overarching theme throughout the volume is the use of ethnographic analogy, and how archaeologists should be critical in its use. This is the first book to examine social learning and innovation in hunter-gatherers from around the world. More is known about social learning in chimpanzees and nonhuman primates than is known about social learning in hunter-gatherers, a way of life that characterized most of human history. The book describes diverse patterns of learning and teaching behaviors in contemporary hunter-gatherers from the perspectives of cultural anthropology, ecological anthropology, biological anthropology, and developmental psychology. The book addresses several theoretical issues including the learning hypothesis which suggests that the fate of Homo sapiens and Neanderthals in the last glacial period might have been due to the differences in learning ability. It has been unequivocally claimed that social learning is intrinsically important for human beings; however, the characteristics of human learning remain under a dense fog despite innumerable studies with children from urban-industrial cultures. Controversy continues on problems such as: do hunter-gatherers teach? If so, what types of teaching occur, who does it, how often, under what contexts, and so on. The book explores the most basic and intrinsic aspects of social learning as well as the foundation of innovative activities in everyday activities of contemporary hunter-gatherer people across the earth. The book examines how hunter-gatherer core values, such as gender and age egalitarianism and extensive sharing of food and childcare are transmitted and acquired by children. Chapters are grouped into five sections: 1) theoretical perspectives of learning in hunter-gatherers, 2) modes and processes of social learning in hunter-gatherers, 3) innovation and cumulative culture, 4) play and other cultural contexts of social learning and innovation, 5) biological contexts of learning and innovation. Ideas and concepts based on the data gathered through an intensive fieldwork by the authors will give much insight into the mechanisms and meanings of learning and education in modern humans. The writings of Julius Caesar have beguiled by their apparent simplicity. Generations of readers have been encouraged to see them as a limpid record of positive achievement. The contributors to this volume demonstrate that the appearance of simplicity is achieved by devious and accomplished art. In nine original studies, focussing mainly on the Gallic War, the contributors trace systems of justification and omission, of measured praise and subtle criticism, which served to promote Caesar and to leave Roman enemies empty-handed. It is shown that Caesar's writing has an ingenuity of description which might seduce the casual Roman sceptic, and an

artfulness of focus which now recalls the cinematographic. Even the notorious regularity of Caesar's syntax and his economy of vocabulary are revealed as pointed elements of a political manifesto. Far from being a plain and traditional record of warfare, Caesar's Commentaries are here shown to illuminate the political thinking of a man on his way to reshaping the world. A rich analysis of the complex dynamic between food collection and food production in the farming societies of precolonial south central Africa Engaging new linguistic evidence and reinterpreting published archaeological evidence, this sweeping study explores the place of bushcraft and agriculture in the precolonial history of south central Africa across nearly three millennia. Contrary to popular conceptions that place farming at the heart of political and social change, political innovation in precolonial African farming societies was actually contingent on developments in hunting, fishing, and foraging, as de Luna reveals. IBSS is the essential tool for librarians, university departments, research institutions and any public or private institution whose work requires access to up-to-date and comprehensive knowledge of the social sciences. Economists can help shape monetary policy, global policy and even how much you pay for a new pair of shoes. For example, did you know globalization changed the market for illegal drugs? How do fitness studios and providers of Internet access earn most of their money?--From the laziness and irrationality of their customers. The book features recent work from top thinkers in the economic field from around the world, such as Philippe Aghion, Paul Krugman, George Akerlof, Gary Becker, and George Loewenstein. The book includes chapters on: - Financial Markets: Are they completely efficient or totally nuts (rational vs. emotional) - The Art of Selling: How marketers use consumer decision making data to sell us products we don't need - The Subprime Crisis: Why it happened and how to deal with it Economics 2.0 makes an impressive case for the argument that economics is not a dry science and that economics principles impact much of our day to day life. Completely without formulas and theoretical ballast, the authors present current findings of prominent economists and expand the economic knowledge of their readers. The authors manage to make complex relationships clear thanks to their clear writing style. Ancestral Diets and Nutrition supplies dietary advice based on the study of prehuman and human populations worldwide over the last two million years. This thorough, accessible book uses prehistory and history as a laboratory for testing the health effects of various foods. It examines all food groups by drawing evidence from skeletons and their teeth, middens, and coprolites along

with written records where they exist to determine peoples' health and diet. Fully illustrated and grounded in extensive research, this book enhances knowledge about diet, nutrition, and health. It appeals to practitioners in medicine, nutrition, anthropology, biology, chemistry, economics, and history, and those seeking a clear explanation of what humans have eaten across the ages and what we should eat now. Features: Sixteen chapters examine fat, sweeteners, grains, roots and tubers, fruits, vegetables, and animal and plant sources of protein. Integrates information about diet, nutrition, and health from ancient, medieval, modern and current sources, drawing from the natural sciences, social sciences, and humanities. Provides comprehensive coverage based on the study of several hundred sources and the provision of over 2,000 footnotes. Presents practical information to help shape readers' next meal through recommendations of what to eat and what to avoid. Representing Rural Women examines representations of the lives and experiences of rural women in North American literature, popular culture, and print, visual, and digital media. It highlights the complexity and diversity of rural women by considering intersecting issues of region, class, race and ethnicity, sexuality, and gender identity. For the filly Estrella, nothing is more precious than freedom. She was born at sea, chattel to men sailing to the New World in search of gold. But Estrella and her herd escaped the conquerors and embarked on a journey across thousands of miles - - bra A lighthearted chronicle of how foods have transformed human culture throughout the ages traces the barley- and wheat-driven early civilizations of the near East through the corn and potato industries in America. The remains of hunter-gatherer groups are the most commonly discovered archaeological resources in the world, and their study constitutes much of the archaeological research done in North America. In spite of paradigm-shifting discoveries elsewhere in the world that may indicate that hunter-gatherer societies were more complex than simple remnants of a prehistoric past, North American archaeology by and large hasn't embraced these theories, instead maintaining its general neoevolutionary track. This book will change that. Combining the latest empirical studies of archaeological practice with the latest conceptual tools of anthropological and historical theory, this volume seeks to set a new course for hunter-gatherer archaeology by organizing the chapters around three themes. The first section offers diverse views of the role of human agency, challenging the premise that hunter-gatherer societies were bound by their interactions with the natural world. The second section considers how society and culture are constituted. Chapters in the final section take the long view of the historical process, examining how cultural diversity arises out of interaction and the continuity of ritual practices. A closing commentary by H. Martin Wobst underscores the promise of an archaeology of foragers that does not associate foraging with any particular ideology or social structure but instead invites inquiry into counterintuitive alternatives. Hunter-Gatherer Archaeology as Historical Process seeks to blur the divisions between prehistory and history, between primitive and modern, and between hunter-gatherers and people in other societies. Because it offers alternatives to the

dominant discourse and contributes to the agenda of hunter-gatherer research, this book will be of interest to anyone involved in the study of foraging peoples. Geller is Irma Cameron Milstein Professor of Bible at Jewish Theological Seminary. Geller's attention to language and interest in applying the methods of literary analysis to the Hebrew Bible are reflected in his work throughout his career. He has addressed such topics as "The Dynamics of Parallel Verse" in Deuteronomy 32, the "Language of Imagery in Psalm 114," and the literary uses of "Cleft Sentences with Pleonastic Pronoun." Combining a historical orientation with deep exegeses of individual texts, he has focused on the contribution that the literary approach might make to the study of biblical religion. He has developed what he terms a "literary theology," in which, by examining the literary devices in the passage under consideration, he has been able to formulate emerging religious ideas that the ancient writers did not express in systematic treatises. His method is illustrated in his studies of texts that represent the major religious traditions of the Hebrew Bible; these studies have been collected in *Sacred Enigmas*, published in 1997. The essays in this volume were contributed by colleagues, friends, and students of Stephen A. Geller to mark the occasion of his 65th birthday. Contributors include: Tzvi Abusch, Marc Z. Brettler, Alan Cooper, Frank Moore Cross, Stephen Garfinkel, Edward L. Greenstein, Robert A. Harris, S. Tamar Kamionkowski, Kathryn F. Kravitz, Anne Lapidus Lerner, David Marcus, Yochanan Muffs, Benjamin Ravid, Michael Rosenbaum, Raymond P. Scheindlin, William M. Schniedewind, Diane M. Sharon, Benjamin D. Sommer. In this book, Glenn Barentin provides a new solution to a key question in the cognitive and evolutionary study of religion: why do humans cooperate? What led humans, uniquely among animals, to have large-scale civilizations with unprecedented cooperation? One explanation, propagated by the Big God Proponents (BGP), argues that a moralizing God is the crucial motivator for the pro-social behaviour necessary for large scale civilization. To explore this idea, Barentin provides a critical assessment of the evidence provided by the BGP, and also discusses the place of God in our moral thinking. However, using evidence from anthropology, history, cognitive science, psychology and game theory, Barentin presents a new theory: that the evolutionary pressures faced by our forebears paved the way for emerging humans to engage in what he terms 'thin cooperation'. This type of cooperation requires individuals to comprehend the reasons for their actions, and it is often done with others in mind. Finally, Barentin argues that humans also have the capacity for 'thick cooperation', which is made possible by those fighting for the rights of strangers in an attempt to make the world a fairer place for a greater number of people. Some forty scholars examine California's prehistory and archaeology, looking at marine and terrestrial

palaeoenvironments, initial human colonization, linguistic prehistory, early forms of exchange, mitochondrial DNA studies, and rock art. This work is the most extensive study of California's prehistory undertaken in the past 20 years. An essential resource for any scholar of California prehistory and archaeology! Jacquelyn Frank, New York Times bestselling author of the *Shadowdwellers* series, invites readers into a dazzling new world of unstoppable desire and danger.. As an Advocate for his colony, Julian Sawyer travels to Earth to bring back the Chosen-women who possess energy potent enough to help revitalize his people. The stunning, silver-clad beauty who strides into his club one night radiates a sensual magnetism unlike any he's encountered, and Julian realizes that Asia Callahan is not just Chosen, she is his kindra: his one true mate. For months, Asia has tracked the beautiful and mysterious Julian across the country, convinced that he's behind the disappearance of her sister and a dozen other women. She's prepared to believe he's a ruthless killer, but when she presents herself as bait, she discovers that the truth is far more shocking. Taken to a strange, hazardous realm she never knew existed, Asia will face the ultimate choice--between abandoning the life she's always known, and forsaking a passion as dangerous as it is powerful.
